

CLAMPING RODS

zevim

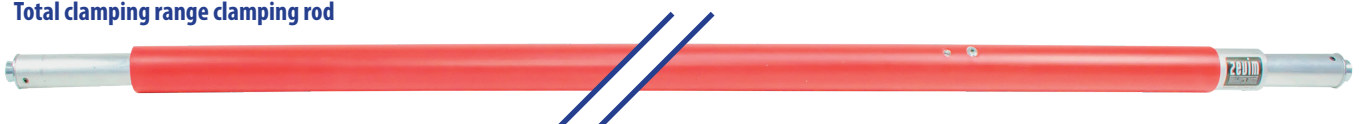

Clamping rods Adjustable/ Telescopic

Ideal for quickly and easily tensioning and securing (sheet) materials in the cargo area of a van. Can be used vertically in combination with load securing rails (aircraft rail) integrated in the floor and mounted on the roof pillars. However, it can also be used horizontally if the load securing rail is mounted on the side wall of the van. Can be used in a straight line or at an angle (approx. 10-15°). Can be used freestanding in the middle of the van, leaving any vehicle racking equipment accessible.

Product features

- Easy to operate with one hand
- Sturdy tube with small diameter, thus saving space
- Simple and variable one-time adjustment to the height of the van
- No bulges on the clamping rod, so that there is always a balanced pressure on the clamping rod
- "Softgrip" protective plastic cover that covers almost the entire clamping rod, reducing the risk of damage to the product being clamped to practically zero
- Available in 6 different lengths (see technical information)

4 Total clamping range clamping rod
